

iCAUR V27

Complete Knowledge Website - Master Product & Development Brief

Egypt-focused • Play / Wild • Feature guides • Screen walkthroughs • How-to videos • Maintenance & troubleshooting

Prepared as a hand-off specification for Claude / an AI coding agent.

Version: September 2026

1. Project Goal

Build a trustworthy Arabic-first website that acts as the complete owner knowledge base for the iCAUR V27 in Egypt. The site must go far beyond a marketing brochure: it should explain what every feature does, where it is located, how to use it, when it is unavailable, how it differs by trim/market, and provide video or source evidence whenever possible.

Primary principle:

Do not mix Egypt-spec iCAUR V27 equipment with China or other export markets. Every factual feature must carry a market/trim verification status.

- Audience: current owners, buyers, sales staff, service staff, and Arabic-speaking users researching the V27.
- Primary locale: Egypt. Main trims: Play RWD and Wild AWD.
- Language: Arabic-first with English technical names shown beside Arabic terms.
- Tone: practical owner manual / knowledge base, not advertising copy.
- Mobile-first: most users will open the guide while sitting in or standing beside the car.
- Search-first UX: users should be able to type questions such as "ازاي افك الاستين؟" or "Lane Assist فين إعداد؟".

2. Recommended Site Architecture

Section	Purpose
Start Here	Quick orientation, trim selector, Egypt-spec disclaimer, popular guides
Specifications	Dimensions, powertrain, battery, range, charging, tires, capacities
Screen & Infotainment	Every menu, shortcut, settings page, display, sound, phone, system
Controls & Buttons	Steering wheel, center console, key, doors, mirrors, windows, physical buttons
Seats & Comfort	Seat adjustment, memory, heating/ventilation, A/C, ambient lighting
Driving	Start/stop, RWD/AWD, driving modes, regen, suspension/steering/brake settings
ADAS & Safety	ACC, lane systems, AEB, blind spot, parking, cameras, warnings
Energy & Charging	REEV behavior, battery, petrol generator, AC/DC charging, V2L
Exterior	Lights, sunroof, tailgate, mirrors, wipers, tow points, spare wheel
Wheels & Tires	Pressure, TPMS, puncture workflow, jack points, spare wheel removal
Storage & Utility	Trunk, underfloor storage, rear seats, accessories, towing/camping
Maintenance	Fluids, inspection points, service, consumables, emergency procedures
Troubleshooting	Warnings, features unavailable, common user errors, reset/recovery guidance
Videos	Curated how-to videos by feature
Play vs Wild	Egypt trim comparison only
Glossary	Arabic/English automotive and ADAS terminology

3. Standard Template for Every Feature Page

Every feature article should use the same structure so the site stays predictable and easy to maintain.

1. Arabic feature name + English feature name.
2. One-sentence summary: what it does.
3. Availability badges: Egypt Play / Egypt Wild / China / Other Export.

4. Verification badge: Confirmed / Likely / Needs Verification / Not Available.
5. Where it is located: screen path, physical button, exterior location, or component position.
6. Step-by-step usage instructions.
7. Conditions required for the feature to work.
8. Cases where it may be disabled or unavailable.
9. Warnings and safety notes.
10. Relevant images or annotated screenshots.
11. Video section: YouTube, TikTok/Douyin, Bilibili, dealer video, or owner video.
12. Source links and date checked.
13. Related guides and keywords for search.

Example

Automatic Parking (الركن الأوتوماتيكي)

Category: ADAS / Parking

Egypt Wild: Confirmed

Egypt Play: Verify

Screen path:

Home > Parking > Auto Park

How to use:

1. Drive slowly beside parking spaces.
2. Open Parking / Auto Park.
3. Select the detected space or custom space if supported.
4. Confirm direction.
5. Start parking and follow on-screen instructions.

Unavailable when:

- An incompatible off-road mode is active.
- Sensors/cameras are obstructed.

Sources:

- Egypt official specification source
- Owner/manual reference
- Demonstration video

4. Content/Data Model

Use structured content, not hard-coded page text. Recommended collection/table fields:

```
Feature {
  id: string,
  slug: string,
  name_ar: string,
  name_en: string,
  category: string,
  subcategory: string,
  summary_ar: string,
  description_ar: richText,
  screen_path: string[],
  physical_location: string,
  steps: Step[],
  requirements: string[],
  unavailable_when: string[],
  safety_notes: string[],
  play_egypt: AvailabilityStatus,
  wild_egypt: AvailabilityStatus,
  china: AvailabilityStatus,
  export_other: AvailabilityStatus,
```

```

verification_status: 'confirmed' | 'likely' | 'verify' | 'not_available',
images: Media[],
videos: VideoSource[],
sources: Source[],
related_features: string[],
search_keywords_ar: string[],
search_keywords_en: string[],
last_verified_at: date
}

```

5. Master Feature Inventory

Screen & Infotainment

- Home screen and vehicle 3D model
- Vehicle Control menu
- Driving Control menu
- Driver Assistance menu
- Lights menu
- Energy menu
- Voice assistant/settings
- Display settings
- Sound settings / equalizer
- Connections
- Bluetooth pairing
- Wi-Fi / hotspot if supported
- Phone integration (CarPlay/Android Auto - verify Egypt)
- System settings
- Language/time/units
- Screen brightness / night mode
- Screen-off / cleaning mode
- Software/version information
- OTA/software update - verify Egypt
- Camera shortcut
- Parking shortcut
- A/C shortcut
- Seat heating/ventilation controls
- Volume and media controls
- Navigation - verify Egypt service support
- User/profile/memory behavior
- Privacy/data settings

Physical Controls

- Steering-wheel buttons
- Cruise/ADAS steering controls
- 360-camera shortcut if fitted
- Center-console rotary control
- Drive-mode selector
- Gear selector
- Hazard button
- A/C physical buttons
- Window switches
- Mirror controls
- Door lock controls

- Sunroof controls
- Roof accessory switches
- Key buttons
- Custom key button
- Horn
- Wiper/washer stalk
- Lighting stalk

Driving & Chassis

- Start / ready state
- RWD vs AWD behavior
- Economy mode
- Comfort mode
- Sport mode
- Custom mode
- Off-road modes
- Energy regeneration levels
- Steering feel setting
- Brake feel setting
- Adaptive damping/suspension setting where fitted
- Hill start / hill descent if fitted
- Electronic parking brake
- Auto Hold
- Traction/stability control
- Low-traction behavior
- Water/mud/sand/rock related modes - market verify

ADAS & Safety

- Adaptive Cruise Control
- Lane Departure Warning
- Lane Keeping Assist
- Lane Centering
- Emergency Lane Keeping
- Forward Collision Warning
- Automatic Emergency Braking
- Blind Spot Detection
- Rear Cross Traffic Alert
- Door opening warning if fitted
- Traffic sign/speed warning if fitted
- Driver monitoring if fitted
- Front/rear parking sensors
- 360/around-view camera
- 3D camera view
- Transparent chassis / 540 view if fitted
- Automatic parking
- Custom parking-space selection if supported
- Airbags
- ISOFIX
- Seat-belt warnings
- TPMS
- ABS/EBD/ESC
- Emergency braking behavior
- ADAS sensor locations and cleaning

Energy / REEV / Charging

- What REEV means
- Electric motor propulsion concept
- 1.5T range extender role
- Battery state of charge
- Fuel tank and generator behavior
- Energy flow screen
- EV range vs total range
- Battery preservation/charge strategy if configurable
- AC charging
- DC fast charging
- Charge port opening/closing
- Charge indicator colors
- Scheduled charging if available
- Charging limit settings if available
- Charging cable release
- Emergency charging troubleshooting
- V2L
- V2L adapter/use cases
- External power safety
- 12V battery basics
- Long-term parking guidance

Comfort & Cabin

- Driver seat adjustment
- Passenger seat adjustment
- Driver memory
- Seat heating
- Seat ventilation
- Rear seat folding
- Headrest adjustment
- Front A/C
- Rear vents
- A/C air direction
- Defog/defrost
- Cabin filtration
- Ambient lighting
- Panoramic sunroof
- Sunshade
- Wireless charging
- USB ports
- 12V outlets
- Cupholders
- Glovebox
- Center console storage
- Door pockets
- Rear storage
- Fragrance system if fitted

Exterior & Utility

- Headlights
- DRL
- High beam
- Automatic lights

- Fog/rear fog if fitted
- Indicators
- Welcome/lock lighting
- Mirrors
- Mirror heating
- Mirror folding
- Windows
- Door locks
- Keyless entry
- NFC/Bluetooth key if Egypt-enabled
- Bonnet opening
- Side-hinged tailgate
- Spare-wheel cover
- Spare wheel removal
- Tow hook / towing point
- Roof rails / accessory points
- Wipers
- Washer fluid
- Exterior cameras/sensors
- Charge door
- Fuel filler

Wheels, Tires & Emergency

- Tire size Play
- Tire size Wild
- Recommended pressure (manual/Egypt placard source required)
- TPMS display
- Low-pressure warning
- Wheel nut security adapter
- Tool kit location
- Jack location
- Approved jack points
- How to raise the car
- How to remove a wheel
- How to remove spare-wheel cover
- How to remove spare wheel
- How to install temporary/full-size spare
- Wheel tightening sequence
- Wheel-nut torque - official manual only
- Puncture precautions
- Towing/recovery precautions

Maintenance & Troubleshooting

- Owner inspection routine
- Coolant locations
- Washer fluid
- Brake fluid - inspection only
- Under-hood component map
- Service schedule
- 12V battery
- High-voltage safety
- Cleaning cameras/radar
- Sunroof care
- Tire rotation
- Warning lights glossary

- Feature unavailable messages
- Charging failure checklist
- Key not detected
- Screen reboot/recovery if documented
- ADAS unavailable due to dirt/weather
- Emergency contacts/service information for Egypt

6. Screen / Infotainment - Required Deep-Dive

The screen section should be one of the strongest parts of the site. Do not create a single generic “infotainment” page. Create a navigable visual map of the entire UI.

Menu	Coverage
Vehicle Control	Doors, windows, mirror folding, auto-lock behavior, key-related settings, convenience settings
Driving Control	Drive modes, regeneration, steering/brake/suspension settings, chassis-related controls
Driver Assistance	ACC, lane, collision, blind-spot, parking and warning sensitivity settings
Lights	Exterior/interior lighting, auto lighting, welcome/lock behavior
Energy	Battery SOC, energy flow, charging settings, V2L, range-related options
Voice	Wake word, supported commands, microphone/voice options
Display	Brightness, theme, units, interface behavior
Sound	Media volume, prompts, EQ, Pioneer configuration when applicable
Connections	Bluetooth, Wi-Fi/hotspot, phone projection, device management
System	Language, time, software, reset, update/version information

For each menu, the page should include a screenshot gallery, numbered callouts, every toggle explained, and “What happens when I turn this on/off?” text. Any option not verified on the Egypt Wild/Play should be visibly labeled as unverified rather than silently presented as standard equipment.

7. Spare Wheel / Tire Change Guide

Create a dedicated “Spare Wheel & Tire Change” hub. This is a safety-critical guide, so procedure details such as jack points and wheel-nut torque must come from the official owner manual or verified Egypt documentation before publishing.

Spare wheel removal - observed demonstration workflow

14. Park safely on firm, level ground; apply parking brake and secure the vehicle.
15. Access the spare-wheel cover and camera/trim area.
16. Remove the relevant trim/cover fastener(s). Demonstration videos show a 10 mm fastener in the cover area.
17. Carefully remove the spare-wheel cover and disconnect any relevant camera/cover connector only if the design requires it.
18. Locate the spare wheel retaining bolts. Demonstrations show three wheel-retaining bolts, with one using an anti-theft/security adapter.
19. Use the vehicle tool kit and the security-wheel adapter supplied with the car.
20. Support the wheel while removing the final retaining bolt, then pull the spare wheel away from the rear carrier.
21. For actual road-wheel replacement: follow only the official jack-point, lifting, tightening sequence and torque specification from the owner manual.

Publishing rule:

Do not state an exact wheel-nut torque, jack point, or lifting procedure unless verified from the official manual / Egypt service documentation.

8. Video & Source Library

The website should embed or link to videos where platform terms allow. Store each video as a source record with title, platform, URL, language, feature tags, market shown, and verification notes.

Source	URL	Use
Official iCAUR Egypt	https://icaur-eg.com/landing/	Egypt product positioning/specification baseline
iCAR Global / China	https://www.icarglobal.com/	Official global/China specs and support/manual area
iCAR support / manual area	https://www.icarglobal.com/zh/fuwuzhichi/index.html?status=2	Owner manual/support discovery
Douyin - V27 UI/settings example	https://www.douyin.com/shipin/7635125309495380020	Infotainment/settings walkthrough
Douyin - vehicle control example	https://www.douyin.com/shipin/7643628507255425076	Vehicle controls / ADAS settings example
Douyin - custom key example	https://www.douyin.com/shipin/7642126885065115690	Custom physical key function example
Douyin - automatic parking example	https://www.douyin.com/shipin/7620287955676088360	Auto park demonstration
Douyin - spare wheel removal	https://www.douyin.com/shipin/7618029901685344282	Observed spare wheel removal workflow
Douyin - service spare wheel video	https://www.douyin.com/shipin/7642919436294375465	Service-center style spare wheel demonstration
Douyin - under-hood cover	https://www.douyin.com/shipin/7618050967702865972	Under-hood / component access example
Bilibili - V27 comprehensive review	https://www.bilibili.com/video/BV1Ni5C6BEYw/	General review / ride / audio / NVH
Bilibili - driver assistance	https://www.bilibili.com/video/BV1VKPTzTExN/	Driver-assistance demonstration
Bilibili - teardown	https://www.bilibili.com/video/BV12twhzHErg/	Mechanical/structural teardown reference

Important: links above are research inputs, not proof that the same feature exists on Egypt-spec cars. The CMS must preserve market context for every video.

9. Verification & Trust System

Badge	Meaning
Confirmed - Egypt	Verified from iCAUR Egypt / GB Auto / Egypt owner documentation / direct Egypt vehicle evidence
Confirmed - China	Verified only for China-market V27
Confirmed - Export	Verified for another export market, not Egypt
Likely	Strong evidence but not yet confirmed for the selected Egypt trim
Needs Verification	Mentioned in a video/listing, but insufficient proof
Not Available	Verified absent from the selected trim/market

Every feature card must visibly show these statuses. Add “Last verified” date and source links.

10. Egypt Trim Baseline - Initial Data

Use the following as an initial content baseline, but the build should allow corrections as owner-manual and dealer evidence is added.

Item	Play Egypt	Wild Egypt
Drive	RWD	AWD
Electric motors	1	2
Power	~185 kW / ~251 hp	~335 kW / ~449 hp
Torque	~300 Nm	~505 Nm
Battery	~20.47 kWh	~34.31 kWh
Wheel size	19 in	21 in
Panoramic roof	Verify/trim-specific	Reported/confirmed in Egypt coverage
Driver seat memory	Verify	Reported in Wild
Premium audio	Verify	Pioneer system reported for Wild
Automatic parking	Verify	Reported/officially promoted on higher equipment

Do not use China-only figures such as 23-speaker audio or China-specific digital-key services as Egypt facts unless separately confirmed.

11. UX / UI Requirements

- Arabic RTL first. English names appear beside Arabic technical terms.
- Sticky global search with typo-tolerant Arabic transliteration support (e.g., استين / spare / كاوتش).
- Trim selector: Play / Wild. When selected, incompatible content should be dimmed or labeled.
- Market selector in admin/CMS: Egypt, China, Other Export.
- Feature cards with availability and verification badges.
- Step-by-step mode optimized for mobile use beside the vehicle.
- Video card with platform, runtime if known, language, and what the viewer will learn.
- Related guides at the bottom of each page.
- Table of contents on long guides.
- Do not autoplay videos.
- Dark mode optional; high readability is more important than decorative styling.
- Search results should prioritize exact how-to answers over marketing/spec pages.

12. Suggested Technical Implementation

Claude can choose a modern stack, but the following is a strong default:

- Next.js + TypeScript.
- Tailwind CSS or equivalent design system.
- Structured content in MDX, JSON, SQLite/PostgreSQL, or a headless CMS.
- Arabic RTL and English LTR support from the beginning.
- Static generation / ISR for guide pages.
- Search index (Pagefind, Meilisearch, Typesense, Algolia, or PostgreSQL full-text depending on hosting).
- Schema.org structured data for HowTo and FAQ content where applicable.
- Image optimization and lazy-loaded video embeds.
- Admin/editor workflow that exposes source and verification fields.
- Do not scrape copyrighted video content into the site; store links/embeds and original commentary/annotations.

14. Acceptance Criteria for the First Website Version

- Responsive Arabic-first home page and navigation.
- Play/Wild trim selector.
- Search working across Arabic and English names/keywords.
- At least 20 fully modeled feature pages using the standard template.
- Screen section with menu hierarchy and placeholder screenshot slots.
- Spare wheel guide with safety disclaimer and video references.
- Video library filterable by feature/platform.
- Source/verification badge system implemented in UI and content model.
- Play vs Wild comparison page.
- Admin/content workflow that lets the owner add/update features without changing application code.
- No unverified China-market feature displayed as an Egypt-standard feature.
- Good mobile Lighthouse/accessibility baseline and fast initial page load.

15. Copy/Paste Prompt for Claude

Give Claude this PDF plus the following instruction:

Build a production-ready Arabic-first iCAUR V27 knowledge website using this PDF as the product specification and information architecture.

The target market is Egypt and the main trims are Play RWD and Wild AWD. Do NOT treat China-market features as Egypt facts. Implement the verification/market badge system exactly as described.

Start by creating:

1. The full project architecture and reusable content schema.
2. Responsive RTL layout and design system.
3. Home page, Specs, Play vs Wild, Guides index, Videos, Sources and Glossary.
4. Feature-page template with steps, requirements, unavailable conditions, safety notes, trim badges, source links, images and videos.
5. The Screen & Infotainment hierarchy.
6. Initial detailed pages for Vehicle Control, Driver Assistance, Auto Park, Cameras, Charging, V2L, Spare Wheel Removal, Tire Change, Seats, A/C, Key, Sunroof and Trunk.
7. Search supporting Arabic and English aliases.
8. A structured content store so I can add 150-200 guides without changing UI code.

Do not invent specifications or procedures. If a value or procedure is not verified, show it as 'Needs Verification'. Safety-critical values (wheel torque, jack points, towing limits, high-voltage procedures) must remain placeholders until an official manual source is attached.

Use the source/video URLs listed in the PDF as research references and store source metadata with every feature. Do not copy copyrighted third-party text verbatim; write original summaries and use links/embeds where permitted.

Before coding all pages, show me the proposed folder structure, database/content schema, main routes, and the reusable FeaturePage component contract; then implement the site.

16. Phase 2 Content Target

After the foundation is built, expand to approximately 150-200 individual guides. Prioritize actual owner questions and high-friction tasks: screen settings, warnings, charging, ADAS, parking, keys, tires, spare wheel, under-hood checks, seat/A/C controls, and feature availability by trim.

The long-term goal is for the website to answer a user question faster and more clearly than searching through a PDF owner manual or random social-media videos.
